

Procedure for updating eTUNALOG software

SPC Oceanic Fisheries Programme

SPC has upgraded the eTUNALOG software.

Here are the instructions for installing this new version:

1. Download the installer file: eTUNALOG_installer_V1.xx
2. Copy the installer file on your desktop.
3. Double click on the installer icon.
4. Proceed with the installation. Please note that towards the end of eTUNALOG installation, PrimoPDF add-on installation will also be launched, in order to later be able to save the PDF as a flat PDF.
5. A shortcut is created on the desktop: eTUNALOG smart logsheet manager
6. Double click on this shortcut to open the eTUNALOG manager window
7. Select the 'Application parameter' tab (4th from the left)
8. Enter the vessel name and FFA Vid
9. In the log sheet template box at the bottom: select the latest template
10. Once selected, click on the edit button next to it. This will open the template for edition. In the template header, please fill in the main vessel details, those that don't change from one trip to the next. When finished, then save the template and close it.
You will now get these details automatically filled each time you create a new trip.
11. Return to the 'Logsheets' tab (second from left)
12. Click on create new trip
